# Exercise # 1

Write down the JavaScript code to declare a variable called myNumber, initialize it with the number 7, add 3 to its value and finally display the new value.

# Exercise # 2

Write a JavaScript code to do the following:

- Ask the user to enter his/her name.
- Display on the screen **Welcome** followed by the **user name**.

# Exercise # 3

Write a JavaScript code to compute and print the perimeter of the rectangle as follows:

- Ask the user to enter the length and the width of the rectangle.
- Computer the perimeter of the rectangle based on the formula:

    perimeter= 2(length+width)

- print the computed perimeter in the output window.

# Exercise # 4

Write a JavaScript for converting Fahrenheit to Celsius as follows:

- As the user to enter the Fahrenheit value.
- Print the computed Celsius in the output window.
